

## **Accenture - Technology Apprentice**

### **We are:**

Accenture helps our clients tackle their toughest challenges while unleashing their fullest potential...and then some. What makes our approach so unique? Operating from the nation's capital, we bring together commercial innovation and leading-edge technologies to deliver implemented digital solutions that far exceeds expectations. How? Our passion meets purpose! Through our diverse culture and inclusive thinking, we embrace our employees' ideas taking them from concept to practical solutions. Not to mention, we sleep well at night knowing our work directly impacts and improves the way the world works. We keep our tech smarts sharp by providing abundant training and certification opportunities. Are you ready to learn and grow in a career, while making a difference?

### **You are:**

A motivated, inquisitive developer. Your superpower? Leveraging Technology to deliver innovative solutions that help our federal clients serve the American public. Driven by curiosity, you explore how new technologies can be applied to solve challenging business problems. You thrive in a collaborative, creative, and productive team environment. You have top-notch communication skills and you're in your element managing projects and juggling priorities in a fast-paced setting where results are everything.

### **The Work:**

- Act as a detective, looking closely at software to make sure everything's working to specification
- Apply application design and development across multiple technology areas
- Troubleshoot basic issues on all types of business and technical systems
- Be a team player, supporting your colleagues and the client
- Help clients with installing and updating software
- Keep well-written records describing how software works, any special configurations and how to troubleshoot basic issues

### **Here's what you need:**

- Experience with OOP languages such as .Net, JavaScript, etc
- Experience with modern frameworks such as node.js, angular.js, react.js
- Understanding of relational databases and database management
- Experience working with APIs or web services
- Familiarity of Agile Software delivery methodologies such as SCRUM
- Experience with git/github

### **Bonus Points**

- Technical knowledge Azure
- Interest in cloud technologies
