

Nexient - Developer

Don't only dream about what's next – come build it with us!

Nexient specializes in bringing a “Product Mindset” to our work, using small, nimble teams, Agile thinking and other techniques from product development to build great custom software people love to use.

And as America’s leading 100% US, 100% Agile software services partner, we’re building it here instead of sending tech jobs offshore.

People are noticing.

Our clients include some of America’s favorite brands in retail, healthcare, financial services and more – but also some very cool product companies you may not have heard of yet. We’re recognized as a Gartner Cool Vendor, HfS Hot Vendor and the only 100% US tech company in the World’s Top 100 Outsourcers. You might have read about us in The New York Times.

Nexient combines:

- Silicon Valley innovation (through our Bay Area innovation hub, and network of startups and emerging technology partners)
- Scalable, Midwest delivery (with 65+ Agile teams in high talent cities like Ann Arbor, Michigan)
- Onsite collaboration (with product managers and other key roles working face-to-face with client teams around the country)

Role and Responsibilities

- Create software code, unit tests and assist with encoding, testing, debugging, and documentation
- Works with Senior Developers to understand client requirements and prepare designs for translating those into software applications
- Ensures work is carried out using established processes, practices and procedures as directed
- Communicates effectively to technical and non technical team members and end users.
- Adheres to documentations processes and guidelines

This job description was sampled from real job postings at Nexient in 2021. The use of this description serves to provide students with practice applying for and researching real companies with real openings and does not in any way promise an opening or an interview with the company listed.
